

HOUND WARMER HEAT PAD

Operation Manual

INSTRUCTIONS FOR USE:

The Heat Pad can be used with 12VDC power from the cigarette plug of a vehicle or it can be used with 110VAC power (adapter is included).

Once plugged in to your vehicle's 12 volt outlet or cigarette lighter or a 110 volt outlet, it quickly reaches 105-108 degrees F and will maintain that temperature until unplugged.

The Hound Warmer doesn't get hot to the touch like a traditional heating pad. It is a warming pad designed to keep your dog comfortable while traveling or overnight without using a lot of energy. Leaving the pad in the open air will allow the heat to dissipate. When your dog lays on the pad, the trapped heat will build up to a veterinary recommended temperature of 110 degrees.

The Hound Warmer only draws 18 watts of power (1.5 amps), so you can safely use it all night long with a typical vehicle battery. In really cold weather, a marine battery is recommended as an alternative power source if your battery is weak.

CLEANING AND MAINTENANCE:

After use, wipe the Pad with a damp cloth and allow to dry. Do not submerge in water. Check Pad periodically for damage.

TECHNICAL DATA:

Input Voltage: 12VDC / 110VAC

Input Power: 18W

Dimensions: 11" X 22" with 9 feet 12V heavy duty cord plus 8 additional feet for the 110 adapter heavy duty cord.

WARNING: Make sure the cable is not accessible for the dog to chew.
